Kunnskapstrening IT, Project lead/Mentor, Freelance

Mai 2017 - Nov 2019

Andreas was a mentor / project manager for young people who took courses through NAV and Kunnskapstrening IT. Andreas task was to work for young people to feel welcome and comfortable with and work in technology projects.

Andreas worked together in a team with other project managers and mentors. Together, they created a solution that is used today to connect NAV with companies that have projects for young talent.

During this period, Andreas also did several voluntary assignments for small businesses, setting up and administering Wordpress pages. Graphic Design for Print and Web, print and invitations.

Technology and tools: HTML / CSS JavaScript, Bootstrap, Django, AWS, Jenkins, Wordpress, PHP, Adobe Creative Suite

Vefsn kommune, IT consultant, Feb 2013 - Mai 2017

Andreas worked as an IT consultant in a team of five who were responsible for the operation of the municipality's IT systems. Andreas gradually became more responsible for the healthcare department, and took care of Database administration, migration of users, systems and updates.

Andreas was the project manager in the migration of 800 XP machines to Windows 7 using the Microsoft Deployment Toolkit and USMT. Later, he also automated all client installations of software and login scripts so that the other consultants in the team did not have to use CDs to install software.

When the municipality was to build a new nursing home, the IT department became responsible for purchasing equipment and deployment. Andreas took on purchasing agreements and had a budget to stay within. For Info Monitors, Andreas chose to use Open Source and Raspberry Pi instead of more expensive solutions. The startup scripts on Raspberry Pi were programmed with Python.

Technology and tools: Microsoft, Office 365, Azure, VMWare, TCP / IP, Dns, Hosting panels, HP Switches, Cisco Telecom Systems, Powershell, Batch, VBS, ISS Web Servers, Apache Web Servers, MSSQL Database, System Center, MDT, Operating Systems, Open Source, Raspberry Pi, and more...

Santander Consumer Bank, IT-support, Mai 2012 - Feb 2013

Andreas worked as an IT consultant in the Technology Department of Santander, Lysaker. There were first-line support assignments over the phone and in person. Service on hardware, software, software installations, printers, switches, and network patching.

Andreas was early to see improvements that could be made to the queuing system, and suggested changes by drawing up UML diagrams in Visio and planning processes that took away queues and streamlining the process from registration to solved case.

Technology and tools: Microsoft, HP, Dell, Cisco, System Center, Active Directory, Help Desk / Service desk, UML, Visio

Bachelorprosjekt i Egmont, Digitalisering av Brettspillet Geni, Januar - Juni 2012

Andreas worked together in a team of four game designers placed in a project at Egmont in Oslo, where the assignment was to make a design on a digital version of the board game Geni. A prototype for iOS was designed and delivered during the project. The focus was on UX, Design and gaming experience. User tests were performed with good response from test participants.

Technology and tools: Scrum, Jira, System Design, Level Design, Visual Storytelling, User Experience Design, Graphic Design, Prototyping, Color theory, Game Psychology

FunCom, Game Designer, Student Project, NITH

As students of NITH, Andreas and a team of Designers and Programmers were deployed in FunCom as game developers. The project the participants were given was a package of requirements from FunCom where the task was to modify an existing project with Unreal Engine, Kismet and work with Agile methods and Scrum.

Technology and tools: Unreal Engine, Kismet visual scripting, System Design, Level Design, Scrum, Jira
